

## Brief Project Description

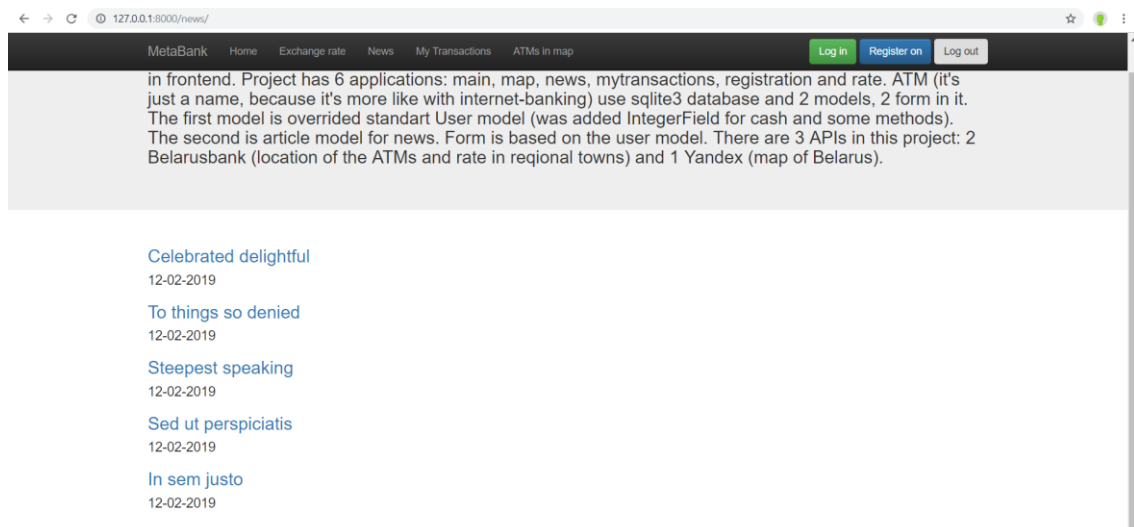

This is the first page of my project. Empty a little bit, but without annoying ads 😊.

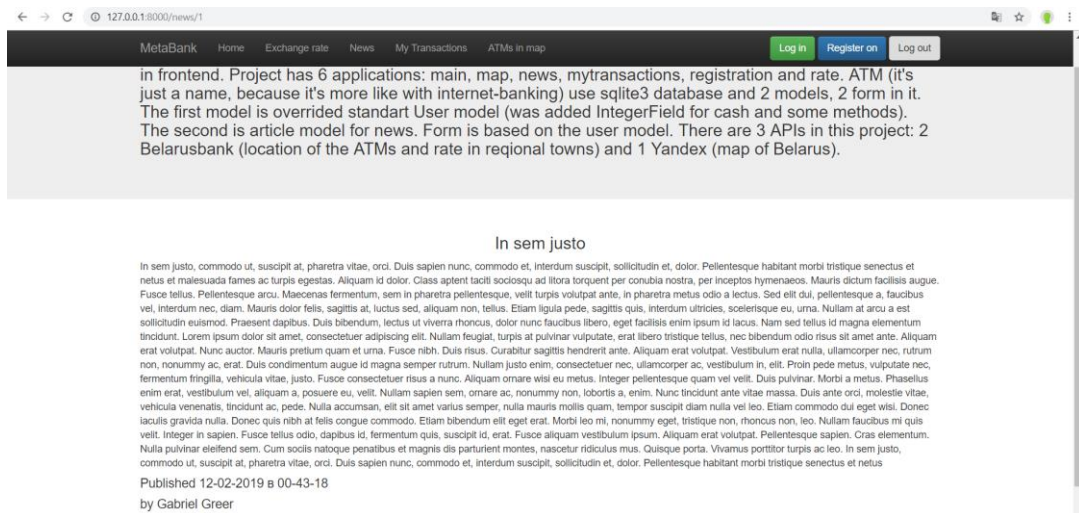

In the second page you can see graph with dollar rate of Belarusbank in all regional towns, that getting by API.

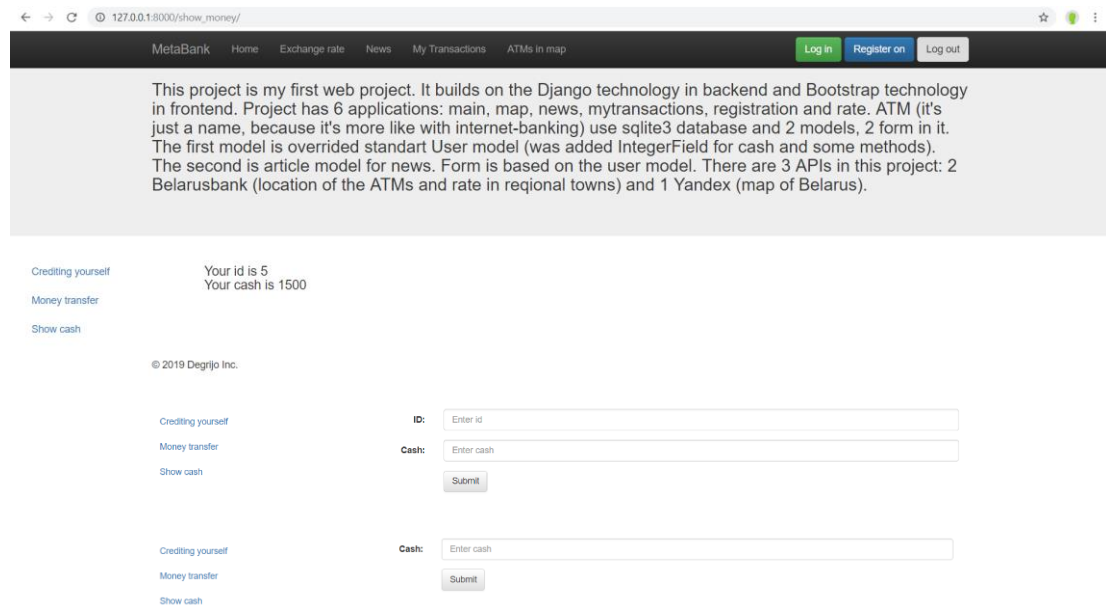

In my site you can scroll down the news category and choose the most interesting.

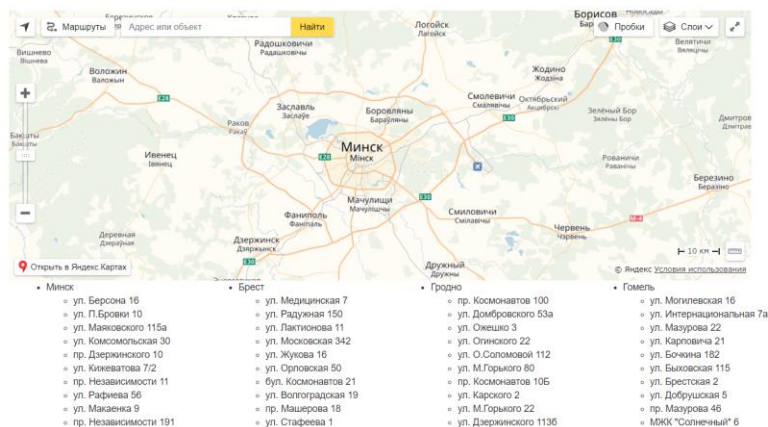

For using “My Transactions” tab you should be authorized (log in, if you have an account or register on, if you don’t). In this page you can see your id, cash, make a money transfer to another user or simulate crediting of money to your cash.

Last tab of my site is Yandex map + location of some ATMs in regional towns of Belarus (everything is getting by API).

Thank you for the checking, it’s important for me, because it’s my first project! Created by Yaroslav Yatsenko.
